As you can see in the illustration, a traumatic experience that involves most or all of the senses - sight, hearing, smell, physical pain - as well as emotions, speech and thought, is stored in multiple regions throughout your brain.

This Is Your Brain | Psychology Today

Strayer's hypothesis is that being in nature allows the prefrontal cortex, the brain's command center, to dial down and rest, like an overused muscle. If he's right, the EEG will show less energy coming from "midline frontal theta waves"—a measure of conceptual thinking and sustained attention.

Call to the Wild: This Is Your Brain on Nature

Neuroscientist Uri Hasson researches the basis of human communication, and experiments from his lab reveal that even across different languages, our brains show similar activity, or become "aligned," when we hear the same idea or story. This amazing neural mechanism allows us to transmit brain patterns, sharing memories and knowledge. "We can communicate because we have a common code that ...
